

This list was compiled from the National Center for Education Statistics. All figures for private universities are for undergraduates/first-time students. Not all applicants who are accepted attend that school. Total cost covers tuition, fees, and room and board for the 2019-20 school year, unless otherwise noted. The undergraduate enrollment total is full-time undergraduates only for fall 2018. Grant or scholarship aid includes aid received from the federal government, state or

local government, the institution and other sources known by the institution for the 2017-18 school year. Retention rates are for students who began studies in fall 2017 and returned fall 2018. The overall graduation rate tracks the progress of full-time students who began studies in fall 2012 to see if they complete a degree or other award such as a certificate within 150% of "normal time" for completing the program, typically six years. Community college statistics are for 2018-19.

An EPIC solution

UNC Charlotte's Energy Production and Infrastructure Center — also known as EPIC — prides itself on preparing students and the future workforce for any situation that could impact the energy sector and electric grid. Formed through private and public funding in response to the need to supply well-educated and highly trained engineers qualified to meet

the demands of the energy industry and to provide sustainable support for applied research, EPIC produces a technical workforce and advancements in technology for the global energy industry while supporting the Carolinas' multi-state economic and energy security. Executive Director Michael Mazzola discussed how EPIC and its affiliated partners are working together to train the next generation of energy professionals to deliver solutions for the industry in a brief interview.

No one can predict when emergencies, such as the COVID-19 pandemic, can hit and how they will impact the energy sector. What steps have you taken to prepare students and workers for events like this? Are you seeing any current threats to the operations of the electric grid?

The energy industry that EPIC serves is among the most critical in our community. The national organization that helps ensure electric power service is reliable and affordable is called the North American Electric Reliability Corporation (NERC). Between NERC and the utilities themselves, there has been a tremendous effort to ensure that the people that run the electric grid stay healthy. This is a highly trained, NERC-certified group of virtually irreplaceable engineers and control room operators. Some utilities are turning their backup control rooms into mini villages where, in some cases, the control room operators' families have taken up residence. This is an impressive display of commitment to serve our community from the employees and managers in our electric utilities, for which every citizen should be grateful.

Can you tell us about your partnership with SOS and its student training opportunities?

One initiative that we undertook with SOS, a company in our EPIC Affiliates Program, is a scholarship to help some of our engineering students graduate with a NERC certification. Traditionally, control room operators have not had an engineering degree. But a trend has begun in the industry to have at least some operators be engineers. This is a reflection of how complex the modern grid is becoming. EPIC is committed to helping educate engineers to be turnkey ready for employment in the energy industry. Our partnership with SOS, a major provider of courses and training leading to NERC control room operator certification, is a unique program among university engineering programs.

Speaking of events that can impact our utilities, our region has recently seen a slew of storms impact our power grid, is EPIC involved in research involving grid resiliency?

An aspect of EPIC's mission is to support the energy industry with timely and practical applied research and development. Some of our research addresses the complex convergence between technology, economics, and social policy. For example, EPIC supported the development of the North Carolina Clean Energy Plan. A question spawned from that plan is the public value of preparing for the next hurricane by investing in electric grid modernization now. EPIC is the technical lead of a major study for the N.C. Department of Environmental Quality and the U.S. Department of Energy to find the right level of investment in grid modernization as a sort of insurance policy against economic loss from devastating weather events such as hurricanes. Our partnership includes the N.C. Clean Energy Technology Center at N.C. State University, and the project is led by the North Carolina State Energy Officer, Ms. Sushma Masemore. The goal is to reduce future economic devastation of the type that all too many of our citizens have experienced from weather events, even before they had heard the word "pandemic."

COMING TO GTCC

means they're
ready to work

GTCC
GUILFORD TECHNICAL
COMMUNITY COLLEGE

At GTCC, we're committed to educating and training the people needed to fuel our economy, and we have been for more than 60 years. Our students leave GTCC ready to work hard and achieve their goals. That's why they're employed across the state in aviation, advanced manufacturing, healthcare, construction, and many other growing industries. Looking to expand? GTCC students are ready to get the job done.
